

I'm going to come right out and say it,"Global warming is a fraud used to justify more taxation and control and loss of personal freedom". Carbon dioxide is not a problem and is not a significant greenhouse gas. The air we breathe is roughly 78% nitrogen, 20.9% oxygen, Argon 0.9% and Carbon Dioxide a mere 0.033% with a host of other gases in small quantities. Water vapour is the most significant greenhouse gas. It is easy to understand this. Compare the difference in temperatures on a summer night that is overcast to a perfectly clear night. The clear night is much cooler. The water vapour retaining the heat.

This planet is running short of carbon dioxide needed for plant photosynthesis. Plant life breathes carbon dioxide and exhales oxygen. Greenhouses pump carbon dioxide to the plants to increase production and growth rates. The more carbon dioxide the better all plant life on this planet will grow. Make an observation of the size of maple leaves close to an urban centre. The leaves are darker, larger and the canopy of the tree is solid. Now compare that to the small light green leaves and see through canopy of trees around Parry Sound. Most of the carbon dioxide this planet was created with is now tied up in limestone – calcium carbonate, hydrocarbons – coal, oil, gas, peat, etc. and coral reefs etc. Rain combines with atmospheric carbon dioxide to form carbonic acid tying up even more carbon.

Al Gore's movie, "An Inconvenient Truth" grossly distorted many scientific facts. The graph showing the earth's temperatures and carbon dioxide levels and how well they fitted together was an outright fraud. I would rather listen to the scientist who did the Vostock ice cores than Mr. Gore. Fact is the earth's temperature went up and the rise in carbon dioxide lagged by 800 years as the oceans released the carbon dioxide dissolved in them. This is easy to demonstrate. Run ice cold water into a glass and then sit it on the counter. As the water in the glass warms up bubbles start to form on the side of the glass. This is the simple truth on the physics of water. As it warms water holds less dissolved mineral and gases.

And that hockey stick at the end of the graph. Well professor Bill from the University of Waterloo used the same computer model with other data and no matter what data he put in he got the same hockey stick at the end of the graph. I believe UCLA also demonstrated the same anomaly.

Fact, many of the scientists who were on the IPCC did not agree that carbon dioxide was affecting climate change and many of the lead writers

have come out publicly saying they were not in agreement with the conclusion. Our news media has been grossly negligent in not reporting both sides of the story. To subject the kids in our schools to Gore's movie without hearing the other side of the story is grossly negligent.

Fact, during the last ice age the carbon dioxide levels were 4000 times higher than they are now.

Climate is always changing. It has always been in a constant state of change. Back in the early 70's scientist were sure we were heading into another ice age. Wrong again!

At anytime in history you could always find some weather disaster that fit the cause they were trying to proclaim. This cold wet summer would be a great one to prove a coming ice age. Can you imagine the hew and cry if hurricane Hazel happened today.

Galileo pointed out 500 years ago that the climate on this earth is directly affected by sun spots. It still is and the sun is the only thing that warms this planet. Winter low sun cold – summer high sun hot.

Glaciers have always advanced and receded and they still are. Be thankful that they do recede or we would be under two miles of ice. Eastern Greenland's Jakobshavn glacier is advancing. Alaska's Hubbard glacier have been advancing at 7 feet per day in July/09. When Captain Cook explored the west coast of North America the glaciers of Glaciers Bay were at the ocean. When Vancouver retraced the same route the glaciers of Glacier Bay had retreated 62 miles inland. The Artic ice cap last winter grew larger than the area of Germany and France combined. Yoy didn't hear that on CTV or CBC.

Fact, this planet is just coming out of the little ice age of the 15 hundreds. This planet was a lot warmer during the medieval warm period. Remember Eric the Red and Leaf the Lucky from grade school history class they were farming (over 50 head of cattle) on Greenland in 1085 AD at the 77th paralell. We in Parry sound at the 45th parelell have a hard time getting enough heat and light to grow things here.

The polar bears made out just fine during the medieval warm period. And about the polar bear population. The people who live in polar bear country say there are more bears than there have ever been. Frankly I give more credence to the locals than an Ottawa biologist or the World Wildlife Fund who are trying to justify there jobs and a huge increase in bureaucracy.

How can the doomsayers tell us what the weather is going to be like 40 years hence when they can't get it right 5 days from now?

The one realization it has taken most of my life to grasp is that while we do a lot of stupid acts to our planet we are in reality insignificant. As George Carlin would say "This planet is gonna do what it wants too".

I am not about to stand by while politicians fleece us of more of our hard earned money or let a bunch of condominium conservationist rule on every aspect of my life. The work and knowledge of credible scientists are deliberately being glossed over or outright ignored to support their agenda. The hundreds of climate scientist who disagree have no voice with the media. So much for fair or impartial. Its time to put an end to the one sided "the end is coming story". Also take note that Al Gore and the boys from Goldman Sachs have set themselves up to be the first carbon tax billionaires. Global warming will turn out to be a bigger fraud than Y2K or the hole in the St. Claire river.
