

## Climate Change Math

Man made climate change is a fraud! Sure you can pave over a green lawn with black asphalt and you will change the micro climate in that area, but thats it.

You have heard that every climate fraudster is having a meltdown over the CO2 levels surpassing 400 ppm. 400 ppm is dangerously low to maintain life on this planet. Let me explain. CO2 is always getting used up by the biosphere. Example: A giant pine will need more CO2 to maintain itself than a pine seedling. Each will breath in CO2, extract the carbon C of CO2 and exhale the O2, oxygen. That carbon is now permanently in long term storage in the tree until that tree dies and rots, or is burned. There is short term storage of carbon in the leaves and needles of trees over the summer season. When trees shed their leaves or needles they fall to the forest floor to rot and release the carbon stored in them back into the atmosphere.

### So lets do the math

**Lets express 400 ppm of carbon dioxide as part of our atmosphere, the air we breath as a math equation.**

$$\frac{400 \text{ PPM}}{1,000,000} = \frac{X}{100} = 0.04\% \text{ of the atmosphere is carbon dioxide CO2}$$

Of this 0.04%, even the most fraudulent scientists say human activity world wide is only responsible for 3% of this 0.04%. In other words, humans are only responsible for 0.0012% of atmospheric CO2 and all human activity by all Canadians in Canada is only responsible for 1.5% of the 0.0012% of the 0.04% of CO2 in the in the atmosphere. So Canadians are responsible for only 0.000018% of all the CO2 in the atmosphere and for this minute amount of CO2 that has NO AFFECT WHATSOEVER on the world climate, our moron politicians are willing to destroy the Canadian economy and impoverish all Canadians. It would be like thinking you could drive from Toronto to Sudbury on one drop of gas! Are you willing to go along with this fraud?

Carbon dioxide is essential to all life on this planet and is in short supply as you can see by the above equation.

Think about it!
