

I have a great idea. Let's take our most toxic industrial waste produced and dispose of it in our municipal drinking water. We'll tell people its good for them. Fake a few studies, buy off the right people. We'll even charge them for the "toxic waste" that we would have to pay for proper and safe disposal of.

A real, "nuts idea" right? Well why do we allow the super toxic industrial waste, Sodium Fluoride to be added to our municipal drinking water? It now proven that it has no benefit to our kid's teeth. Every follow up study has shown no benefit and in many cases the reduction in dental cavities was greater in non-fluoridated areas. The countries that made it illegal to add fluoride to their drinking water had the same or greater reduction in dental cavities.

What's known now about fluoridation is truly frightening.

There were never any double blind studies to prove the safety and effectiveness of adding fluoride to the water. They simply added fluoride to the water supply of one city and after five years said there was a 30% reduction in dental cavities. Sounds great until you find out that there was a 30% reduction right across the nation without any fluoride.

The promotion of better dental hygiene and diet were the real reason for the improvement in dental health.

Research however shows that cancer rates did start to rises in the years following the advent of fluoridation. Dr. Markus of the US EPA warned of this and was terminated from his job for making it public.

We have an epidemic of cancer and chronic disease in our society. Is it not simply prudent to remove any possible known cause? It is estimated that sodium fluoride causes an estimated 10,000 cancer deaths a year.

Harvard and dozens of other studies show it lowers the IQ of children 10 to 20 points.

It accumulates in the pineal gland causing early onset puberty in girls. It collects in many of the organs and bones of the body.

It increases the uptake of lead in children. If your house was built before 1988 then you probably have lead solder joints in your plumbing.

Check your kid's teeth. White chalky marks are a sign of too much fluoride. Its called dental fluorosis and a warning sign of too much Fluoride!

It should never be used to make infant formula as the levels added to our drinking water are far too toxic for babies and young children. The levels of sodium fluoride in municipal drinking water is 250 times the level in breast milk.

“When formula concentrations need to be diluted, it is recommended parents **use bottled water that is fluoride-free or low in fluoride** or tap water from a reverse osmosis home water filtration system, which removes most of the fluoride.

SOURCE: Academy of General Dentistry. ”Monitor Infant’s Fluoride Intake.” The American Dental Association, The National Academy Of Science, The American Medical Association, and The American Association of Pediatrics all agree that the amount of fluoride in municipal water used to mix infant formula exceeds the amount known to cause harm. Sodium fluoride is one of the most deadly inorganic poisons known to man right up there with cyanide, lead, and arsenic. It is collected from scrubbers in industrial smoke stacks and contains numerous other toxins.

It is the chemical in rat and cockroach poison.

Read the warning on your tube of toothpaste. If your child swallows even a tiny amount it says to call the poison control centre immediately!

Because it is used as a pesticide we get it on our fruits and vegetables. Since juices and soft drinks are reconstituted with municipal water they contain fluoride. We are getting way too much fluoride!

Once again our government is asleep at the wheel ignoring the testimony of over 120 EPA scientist before the US Congress as to the real dangers of fluoridation. I have waited for the last year to see if any

officials in our government were paying attention to all the scientific info being made public. Obviously they are not.

So why was fluoride added to the water? I mean the real reason. Its what we learned from Adolf Hitler. He had fluoride put in the drinking water of the concentration camps. It makes people apathetic, complacent, uncaring, and unmotivated. What do you think Prozac is, but a fluoride compound?

And in the January edition of the Journal of Nuclear Medicine Communications “ mass fluoride exposer may be to blame for the cardiovascular disease epidemic”. Hardening of the arteries.

It causes skeletal fluorosis, which is often misdiagnosed as arthritis. It is my personal belief that it will be implicated as a major cause of Alzheimer’s disease.

Get the fluoride out of your municipal drinking water NOW! It is a very toxic poison. Call your mayor and tell him to order the fluoride pumps be turned off immediately. It your right not to be poisoned or medicated without your consent.

Ask anyone who disagrees to provide scientific evidence as to safety and effectiveness of Fluoride. A credible, double blind, peer reviewed study, that proves the safety and effectiveness of fluoridating drinking water. None exist!

As a final note I find it a paradox that people bath and shower in two of the most toxic chemicals known to man, sodium fluoride and chlorine, both of which we absorb through our skin and inhale as steam and then we want to blame the life giving sun for the epidemic of skin cancers. Vitamin D from the sun is proven to reduce cavities and cancers.
